

Press Release

Digitalization with security – euromicron Group showcases precisely tailored cybersecurity concepts at it-sa 2019

IT and OT security for Smart Industry, critical infrastructures and digital processes

Frankfurt/Main / Backnang / Saarbrücken, September 16, 2019 – euromicron AG, a medium-sized technology group and specialist for digital support of business processes through secure infrastructures, is presenting security solutions for Smart Industry, critical infrastructures and automation processes at this year's it-sa. Trade visitors can find out at **Stand 9-506 in Hall 9** how the digital transformation can be accomplished without sacrificing IT and operational security. The trade show will be held in Nuremberg from October 8 to 10.

As a result of digitalization, IT environments are increasingly merging with OT environments, i.e. industrial engineering in factory halls or control technology for critical services, such as at public utilities. In view of the rapid increase in the number of connected devices and players who access them, end-to-end and comprehensive cybersecurity is now more important than ever. At Europe's largest fair for IT security, the subsidiaries telent GmbH and KORAMIS GmbH are presenting all-round solutions that meet the requirements of the German IT Security Act and fulfill the very highest criteria in terms of availability, integrity and confidentiality. As part of that, employees at the stand will demonstrate solution approaches that offer both small and medium-sized enterprises and large companies a secure means of embarking on digitalization.

As a system integrator, telent focuses on system hardening and secure networks, with the main emphasis on segmentation and network security, among other things with the innovative Cisco DNA solution. Backed by its many years of practical experience, telent boasts extensive know-how in planning, creating and operating secure networks and systems in the critical infrastructure arena and beyond.

KORAMIS provides end-to-end solutions for cybersecurity, automation, process control systems and power system control technology. They include industrial automation, industrial IT security, SMSs (security management systems), security analyses (GAP, weaknesses, risks) and the in-house development InDEx, a data lock-keeper for intelligent data exchange. euromicron is merging the areas of smart IoT, smart buildings and data management by founding a Digital Hub under the roof of the cybersecurity specialist KORAMIS. Customers therefore benefit from tailored, cross-process support relating to the subject of digitalization.

"It's not possible to cope with digitalization and the Internet of Things using traditional security solutions. Instead you need a state-of-the-art, customized cybersecurity strategy that takes into account people, organizations, processes and technologies alike," explains Michael Krammel, Managing Director of KORAMIS.

Robert Blum, Managing Director of telent, adds: "We combine the technically and economically most expedient components from the fields of communications networks, IT infrastructures, applications and services to create our cybersecurity solutions. Our consultants will be pleased to demonstrate at the stand how we accomplish individual security requirements for operators of critical infrastructures and companies."

Richard Peddi, Security Solution Consultant at telent, will hold a talk at the Forum 10.0 on the subject of: **"Operation Technology (OT) vs. Information Technology (IT) – Become a Business Enabler"**. The visit to the Forum is included in the admission.

Date: October 8, 2019
Time: 11:45 a.m. – 12:00 midday
Place: Hall 10.0 / Stand 10.0-640

About euromicron:

euromicron AG is a medium-sized technology group that unites 16 companies from the fields of Smart Buildings, Smart Industry, Critical Infrastructures and Smart Services. Rooted in Germany, euromicron operates internationally with its around 1,900 employees at 40 locations. Backed by its expertise in sensor systems, terminal devices, infrastructures, platforms, software and services, euromicron is able to offer its customers end-to-end solutions from a single source. As a result, euromicron helps small and medium-sized enterprises, large companies and public-sector organizations enhance their agility and efficiency, prevent security risks and develop new business models.

As a German specialist for the Internet of Things (IoT), euromicron enables its customers to network business and production processes and successfully achieve digitization. euromicron AG generated total sales of €318.0 million in fiscal year 2018. www.euromicron.de

About telent:

telent GmbH – a euromicron Group company – offers tailor-made technology solutions and smart services in the field of critical infrastructures (KRITIS). telent plans, builds and operates the network infrastructures its customers require to ensure secure enterprise communication, using cutting-edge products and systems from various prestigious vendors. In networking and automating digital business processes, telent mainly relies on its extensive expertise in the fields of cybersecurity, state-of-the-art IP and radio networks, the IoT (Internet of Things) and network management and asset management systems. The company contributes its know-how to creating suitable IoT infrastructures in order to enable faster implementation of applications for the smart city, smart energy and smart transportation, as well as solutions for industry and the public sector in Germany. www.telent.de

About KORAMIS:

KORAMIS GmbH has been providing solutions for automation, process control systems and power system control technology since 1999. By pooling its competences in industrial automation and industrial software, taking into account industrial security requirements, and thanks to its own research activities, KORAMIS is able to deliver end-to-end solutions for Smart Industry and the Internet of Things (IoT) in the ongoing process of digital transformation. In this connection, KORAMIS has coined and introduced the term “industrial continuity management” (ICM). The necessity and motivation to continuously further develop processes and solutions in the field of security means that KORAMIS has for many years now cooperated closely with specialist institutes, technology partners and system suppliers in the various subject areas and actively collaborates on work groups of bodies and committees tasked with defining guidelines, such as the Industry 4.0 Platform. Thanks to its international experience and specialization in the field of industrial security, KORAMIS now numbers many prestigious companies as its customers. The company has won several awards for its commitment. www.koramis.de
